

6N arithmetic geodynamics: tuple size = stratum decay rate

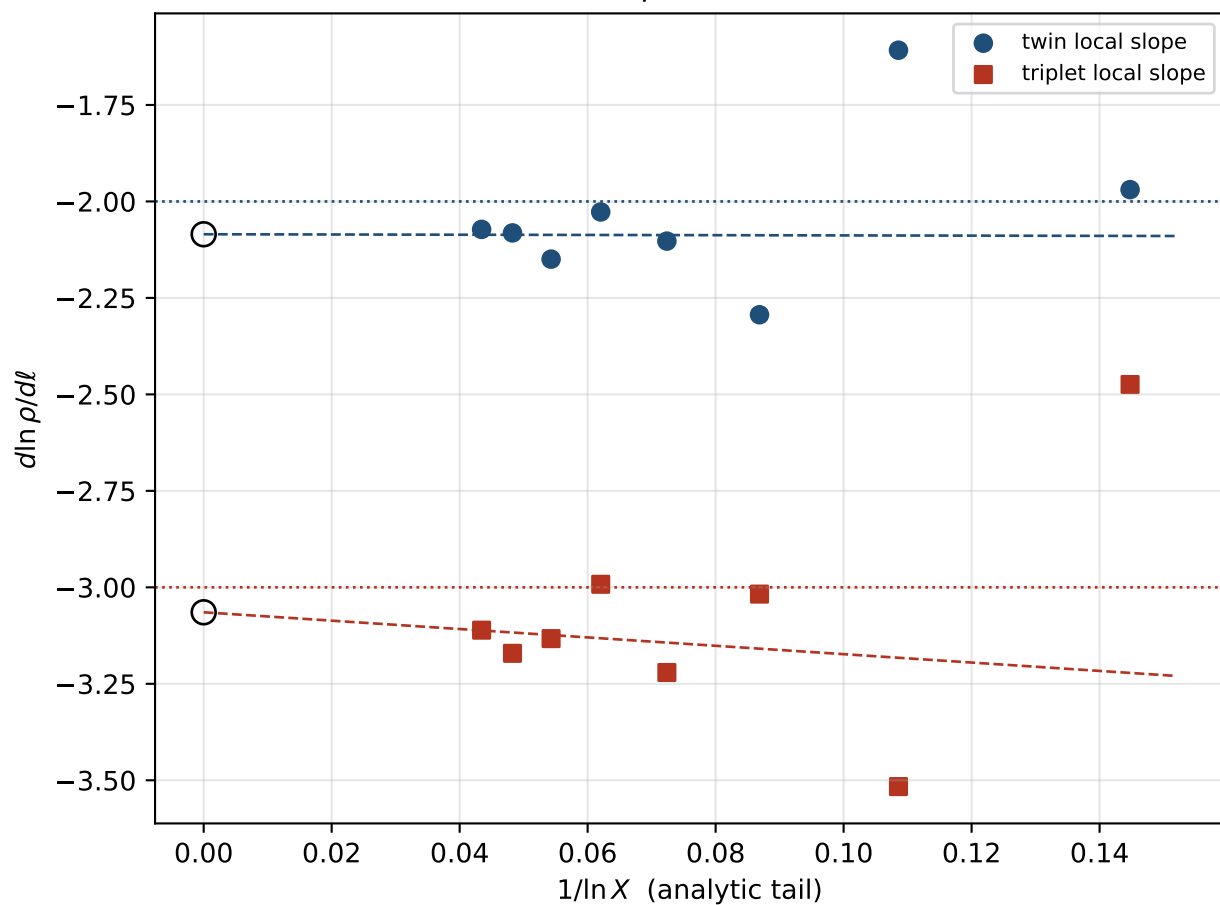

(A) depth flow: slope $\rightarrow -m$

(B) $\bar{\omega}$ phase plane: ratio = 1.51 (= 3/2)

(C) tail dissolves: slope $\rightarrow -2, -3$ as $1/\ln X \rightarrow 0$

(D) $\bar{\omega}$ drift: main + Mertens B + shift $\rightarrow 0.2604$
